519-969-9880**DID YOU KNOW?****Tire Inflation**

Under inflation can have detrimental effects on the performance of your tires and vehicles. Increased tire wear rates, irregular tread wear, reduced casing durability and lower fuel economy are some of the unnecessary costs incurred from tires running under inflated. Tests have shown that running tires 15% under inflated on steer, drive or trailer results in an 8% drop in expected tread life and a 2.5% decrease in fuel economy.

Benson Tire therefore recommend checking tire pressure once a week on all tires.

**Retreading**

New non-destructive testing devices and improved rubber chemistry allow our industry to produce very high quality retreads. This is why our industry is able to produce millions of safe fuel efficient, low rolling resistance, retreads every year. Practically every major trucking fleet worldwide routinely uses retreads as a way to keep tire costs down at the same time making their contribution to the environment.

Retreading is far more environmentally friendly than new tires. Why throw away the old casing when it can be made new again.

Benson Tire has 3 retreading plants in Ontario...in Cornwall, London and Mississauga. Want to see how it's done? Contact one of our locations to book a plant tour.
