DID YOU KNOW?

**Looking for a cost-effective
tire replacement?
RETREADING IS THE ANSWER.**

The lowest possible cost-per mile is achieved with a good tire management program that includes the use of quality retreads. Retreads are also environmentally friendly.

Tires are basically petrochemical products. It takes approximately 22 gallons of oil to manufacture 1 new truck tire. Most of the oil is found in the casing, which is reused in the retreading process. As a result, it takes only 7 gallons of oil to produce a retread.

Wide based truck tires save even more fuel.

**Benson Tire
is committed to the
highest quality
of retreading.**

**Stop by one of our
locations today and
let us show you how
we can save you money.**
