519-969-9880**DID YOU KNOW?****Retreading**

New non-destructive testing devices and **improved rubber chemistry** allow our industry to produce **very high quality retreads**. This is why our industry is able to produce millions of safe fuel efficient, low rolling resistance, retreads every year. **Practically every major trucking fleet worldwide routinely uses retreads** as a way to keep tire costs down while at the same time making their contribution to the environment.

Retreading is far more environmentally friendly than new tires. Why throw away the old casing when it can be made **"NEW AGAIN"**.

Benson Tire has 3 retreading plants in Ontario ...in Cornwall, London and Mississauga. Want to see how it's done? Contact one of our locations to book a plant tour.

Benson Tire is committed to the highest quality of retreading.
