**TIP OF THE MONTH****THE IMPORTANCE OF BUYING THE RIGHT TIRES**

No matter how well you take care of your tires, if you're not running the right kind for your application, the process becomes far more difficult. **"Selecting top quality tires, fortified with the latest technology, is essential to optimizing tire mileage,"** says Goodyear's Richards.

The old saying, "you get what you pay for," definitely holds true with tires. **Major manufacturers, he says, produce tires with materials, reinforcements and tread designs to optimize performance.** This includes tire casings that support multiple retreadings, which helps increase a tire's cradle-to-grave value.

In addition, more and more **tires are being developed for specific applications, or for specific goals such as longer tread life or better fuel mileage.** Work with your tire dealer to determine which is best for you!
