

Returning Shelving and Racking to the Warehouse (030)

Any stores that have excess shelving or racking should return it to the warehouse, so that it is available for use at other locations.

Warehouse Shelving (Metalware type only)

Warehouse shelving units consist of T-posts, side panels, back panels and braces as well as the shelves themselves. These are in Parts Handler under **DWC line** (see below). These can be billed back to the warehouse **AS WARRANTIES**, so as not to affect inventory. Please check the sizes and bill accordingly.

There are also hardware elements, such as shelf clips, gussets, brackets and feet which should also be returned but not billed. Also please return any nuts and bolts.

Black shelves can be returned under the grey part # as the prices are the same.

Any items not listed in Parts Handler, please return with a covering note. Credit for any of these items is at the discretion of the Warehouse Manager. No credits will be issued for pegboard or slat wall returns.

Dexion Shelving

Dexion shelving is no longer installed within the Benson Group so no credits will be issued for this style of shelving that is returned to the warehouse. It can be returned to 030 with a covering note.

Pallet Racking and Tire Racking (uprights and beams)

Please return with a covering note. Again any credits issued will be at the discretion of the Warehouse Manager.

Note: the beam length is measured between the uprights (i.e. it does not include the connectors at each end).

DAMAGED GOODS

Do NOT bill back any damaged items. They can be returned to 030 as scrap as per other scrap metal items, but do NOT send back large scrap items that are difficult to handle but dispose of locally.

Packing and Shipping

Shelving can usually be sent back in buckhorns, but be careful to not overload and cause damage.

When shipping uprights and beams please notify the logistics department at 030 (ext. 290) (or your local contact, if it is a third party carrier) so they can pre-warn the driver. Remember for most locations the driver is on his/her own and cannot handle awkward or heavy items alone. Special arrangements may need to be made to get the items back to 030.
